EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with John Giezentanner on 12/6/2005.

3. The application has been amended as follows:

In the Specification:

On page 1, line 7, --and also claims priority as a continuation of US Patent 6,095,739, filed 7/2/1998-- immediately after "60/051652" .

In the Claims:

Claim 14 has been amended to insert --and-- between 'fastener' and 'connector' in line 1.

Claim 14 line 10 has been amended to insert --is required by regulation and -- immediately after 'connector which'.

Claim 14 line 12 has been amended to insert --of connectors used in the building construction arts, said building construction connectors -- immediately after 'the group'.

Claim 14 line 16 has been amended to insert --an exterior surface of the-- immediately after 'colored indicia on'.

4. The following is an examiner's statement of **reasons for allowance**:

First, examiner notes that "finished fastener" is taken to mean a fastener which

Art Unit: 3677

could be used as is, not requiring the color applied to the surface to be a functionally complete fastener. This is specifically intended to exclude galvanized fasteners without any additional color coating -- that is, the galvanized coating is NOT considered a color-coding coating. Examiner further notes that this is inherent in the specification and drawings -- for example, page 9, the bottom paragraph continuing to page 10 and the first full paragraph on page 10 make clear that the "common wire nails" are regular, ready-to-use nails (Fig 1A) and that the same nails have color applied to at least some surface (Fig 1B) as part of the claimed invention. In examiner's opinion, a common wire nail of Fig 1A could not be a nail awaiting galvanizing, as this would not be considered by one of ordinary skill to be a common wire nail, and certainly not a finished fastener.

The independent claim requires a finished fastener and a finished connector both having color applied to at least some exterior surface such that the color matches and serves to indicate at least two physical properties of the fastener, required to be used with the matching connector. While a color coding key in and of itself is not novel, the combination of the colored fastener, same-colored building construction connector, and color coding key, in effect serving as a pre-assembled kit to correlate a specific color to at least two different physical properties of the finished fastener, would require the claimed apparatus (fastener, connector and key) to be able to perform a specific function (identifying at least two physical properties by a single color to ensure that a fastener and building construction connector are properly mated). A fastener and connector, painted the same color after assembly to, for example, indicate that they had been inspected or to achieve a decorative appearance, would not meet this limitation.

Examiner further notes that applicant has used "connote" in claim 17 in a manner that indicates applicant has intended (see para 11 and 16 of specification) to define it as --indicate-- or --denote-- is more commonly used.

con·note (kə-nōt') *verb, transitive*

1. To suggest or imply in addition to literal meaning: "*The term 'liberal arts' connotes a certain elevation above utilitarian concerns*" (George F. Will). See Usage Note at denote.

2. To have as a related or attendant condition: ¹

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
